Other Useful Information	68
Checking Your Reference List	69

Chapter 10 Additional Elements and Finishing Touches 70

Additional Elements	71
Finishing Off	73
Proofreading and Editing	73
Finally...	74

INTRODUCTION

Most postgraduate courses and many undergraduate courses around the world require the submission of a written thesis or dissertation.

Dissertation is usually the word used for the most substantial piece of independent work in the undergraduate programme, while a thesis is associated with master's or doctoral degrees. These terms are often used interchangeably, however, and may vary between countries and universities. In this guide, the terms are used interchangeably.

A thesis usually explains and discusses a piece of original research carried out by the student. Writing it can be a daunting prospect, as it is probably the single biggest piece of work you will ever have done, and will carry the largest mark. Many people also struggle to know what to include in each section, even within a given structure, or what is meant by some of the terminology.

This Skills You Need guide, one of a series aimed at students, is designed to reduce some of the confusion and concerns.

Dissertations generally have a clearly defined and shared format, with some minor tweaks at different universities and study institutions. This eBook explains what should be included in each of the usual sections, and provides some background to help you decide what goes where, and how to write up your research.

If your study institution requires a slightly different format, it will usually contain either the same or very similar elements, but perhaps in a different order, or with a different emphasis. For example, some universities place a higher emphasis on data analysis, and require a separate chapter on this area.

We hope that this guide will be useful in deciding what to include, and in how to write up your work.
